

Full-Stack Engineer with 3.5 years of experience delivering data-driven workflows and modernizing legacy systems across the Node, React, and PostgreSQL ecosystem.

Skills

Javascript, PostgreSQL, GraphQL, React, REST APIs, AWS (S3, EC2, RDS), CI/CD (Jenkins, GitHub Actions)

Work Experience

Tata Consultancy Services

August 2022 - Present (3.5 Years)

- **Reduced report download time** from 6 minutes to 2 seconds using SQL optimizations and a combination of AWS S3 and cron jobs to pre-generate reports.
- Engineered a reusable **charting library for pdfmake** to create dynamic line, bar and pie charts in PDFs.
- Created reusable React components using **Test Driven Development** to redesign a legacy dashboard, **reducing development time by 24 days**.
- **Lowered page load time** to less than 3 seconds through route-based code splitting and service-worker caching.
- **Mentored junior developers** and conducted in-depth **code reviews** to enforce coding standards, validate database/API design, and catch logical issues.
- **Optimized Jenkins CI/CD pipeline** and **reduced deployment time** from 30 minutes to 12 minutes.
- Built **data-driven workflows** enabling clients to act on KPI drops and improve operational efficiency.
- **Performed code migration** from Node 8 to Node 20 for frontend and backend, including updating dependencies, webpack config and Jenkins pipelines.
- **Optimized SQL queries**, developed multiple back-end stories, and maintained a suite of **reusable React components**.
- Recognized with the **Star of the Quarter Award**.

Projects

Moderation (Financial Planner App)

[Android Play Store](#)

- Owned the **full app lifecycle** - from UI/UX design and feature implementation to automated testing, CI/CD setup and Play Store deployment, ensuring a seamless release process.
- Implemented **clean architecture** with modular layers for data, repositories, services, and view to ensure scalability and maintainability.
- Built a **custom code generator** (using source_gen and analyzer) to auto-generate randomized data for automated tests.
- Wrote **integration tests** and **database migration tests** for backward compatibility across app updates.
- Integrated with Google Cloud APIs (Drive and Sheets) to support encrypted data backup and restore
- Used **AdMob** (rewarded ads) and **RevenueCat** (monthly subscriptions) for monetization.
- Features Implemented - Budget Planner, Shopping Lists, Data Backup, Habit Tracker, Analytics, Excel Data Import, and Liquidity Alerts.

Clickup Clone

[GitHub \(71 Stars, 21 Forks\)](#)

- Built a clone of the ClickUp project management tool using **Next.js, Express and MongoDB**.
- Designed **REST APIs** and hierarchical data model for workspaces, folders and tasks to support nested relationships and querying.
- Used **Redux & Thunk**, and **Container-Component** architecture to maintain separation of concerns between UI and data.
- Built frontend using reusable **functional components** and **hooks**.
- Developed Kanban board for visualizing tasks and drag-and-drop updates.

Education

B.E. Electronics and Telecommunications (July 2022)

CGPA: 9.5 / 10.0

Government College of Engineering and Research
